SafeFile | SlimFile

A SHORT GUIDE

I spent this week on a small question: when you black out a number on a document, is it really gone?

SafeFile covers the personal details in a document. It runs in your browser, so the file never leaves your computer.

Always check the recipient's own instructions. Rules differ by who you are sending the document to.

A black box is not always a redaction.

Draw a black rectangle over a number in a PDF and the number is usually still there underneath.

Insurer number [redacted]

Insured number [redacted]

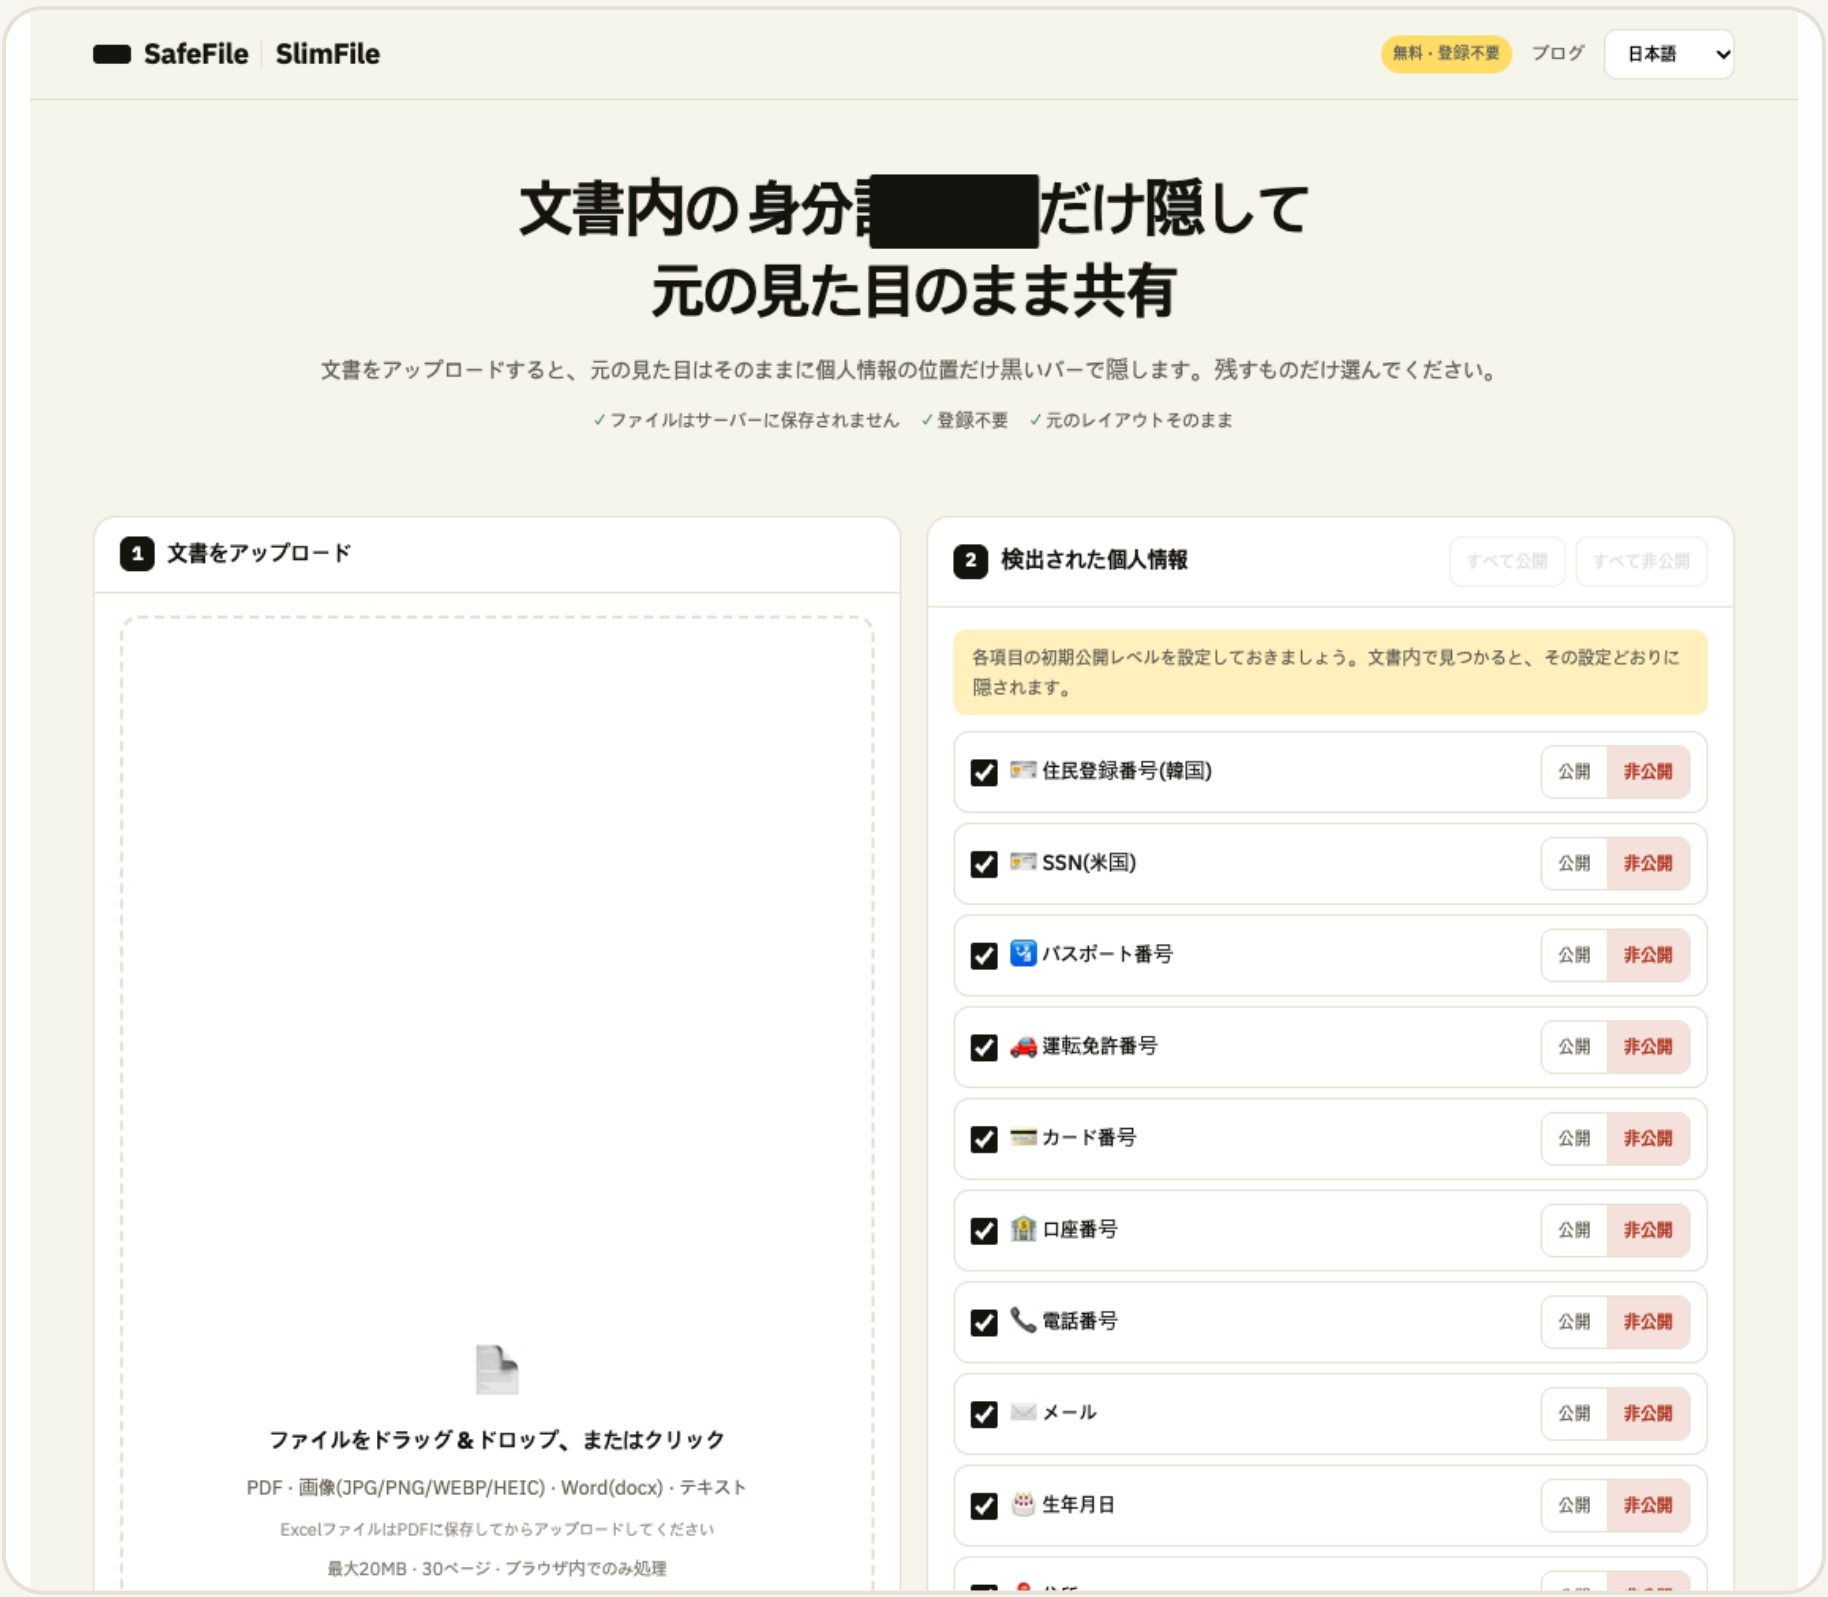

Select → copy → paste gives you back: `01230567` `4821` `9930`

Always check the recipient's own instructions. Rules differ by who you are sending the document to.

SafeFile | SlimFile

Step 1 — drop it in

Drop the file in. A PDF or a photo both work.

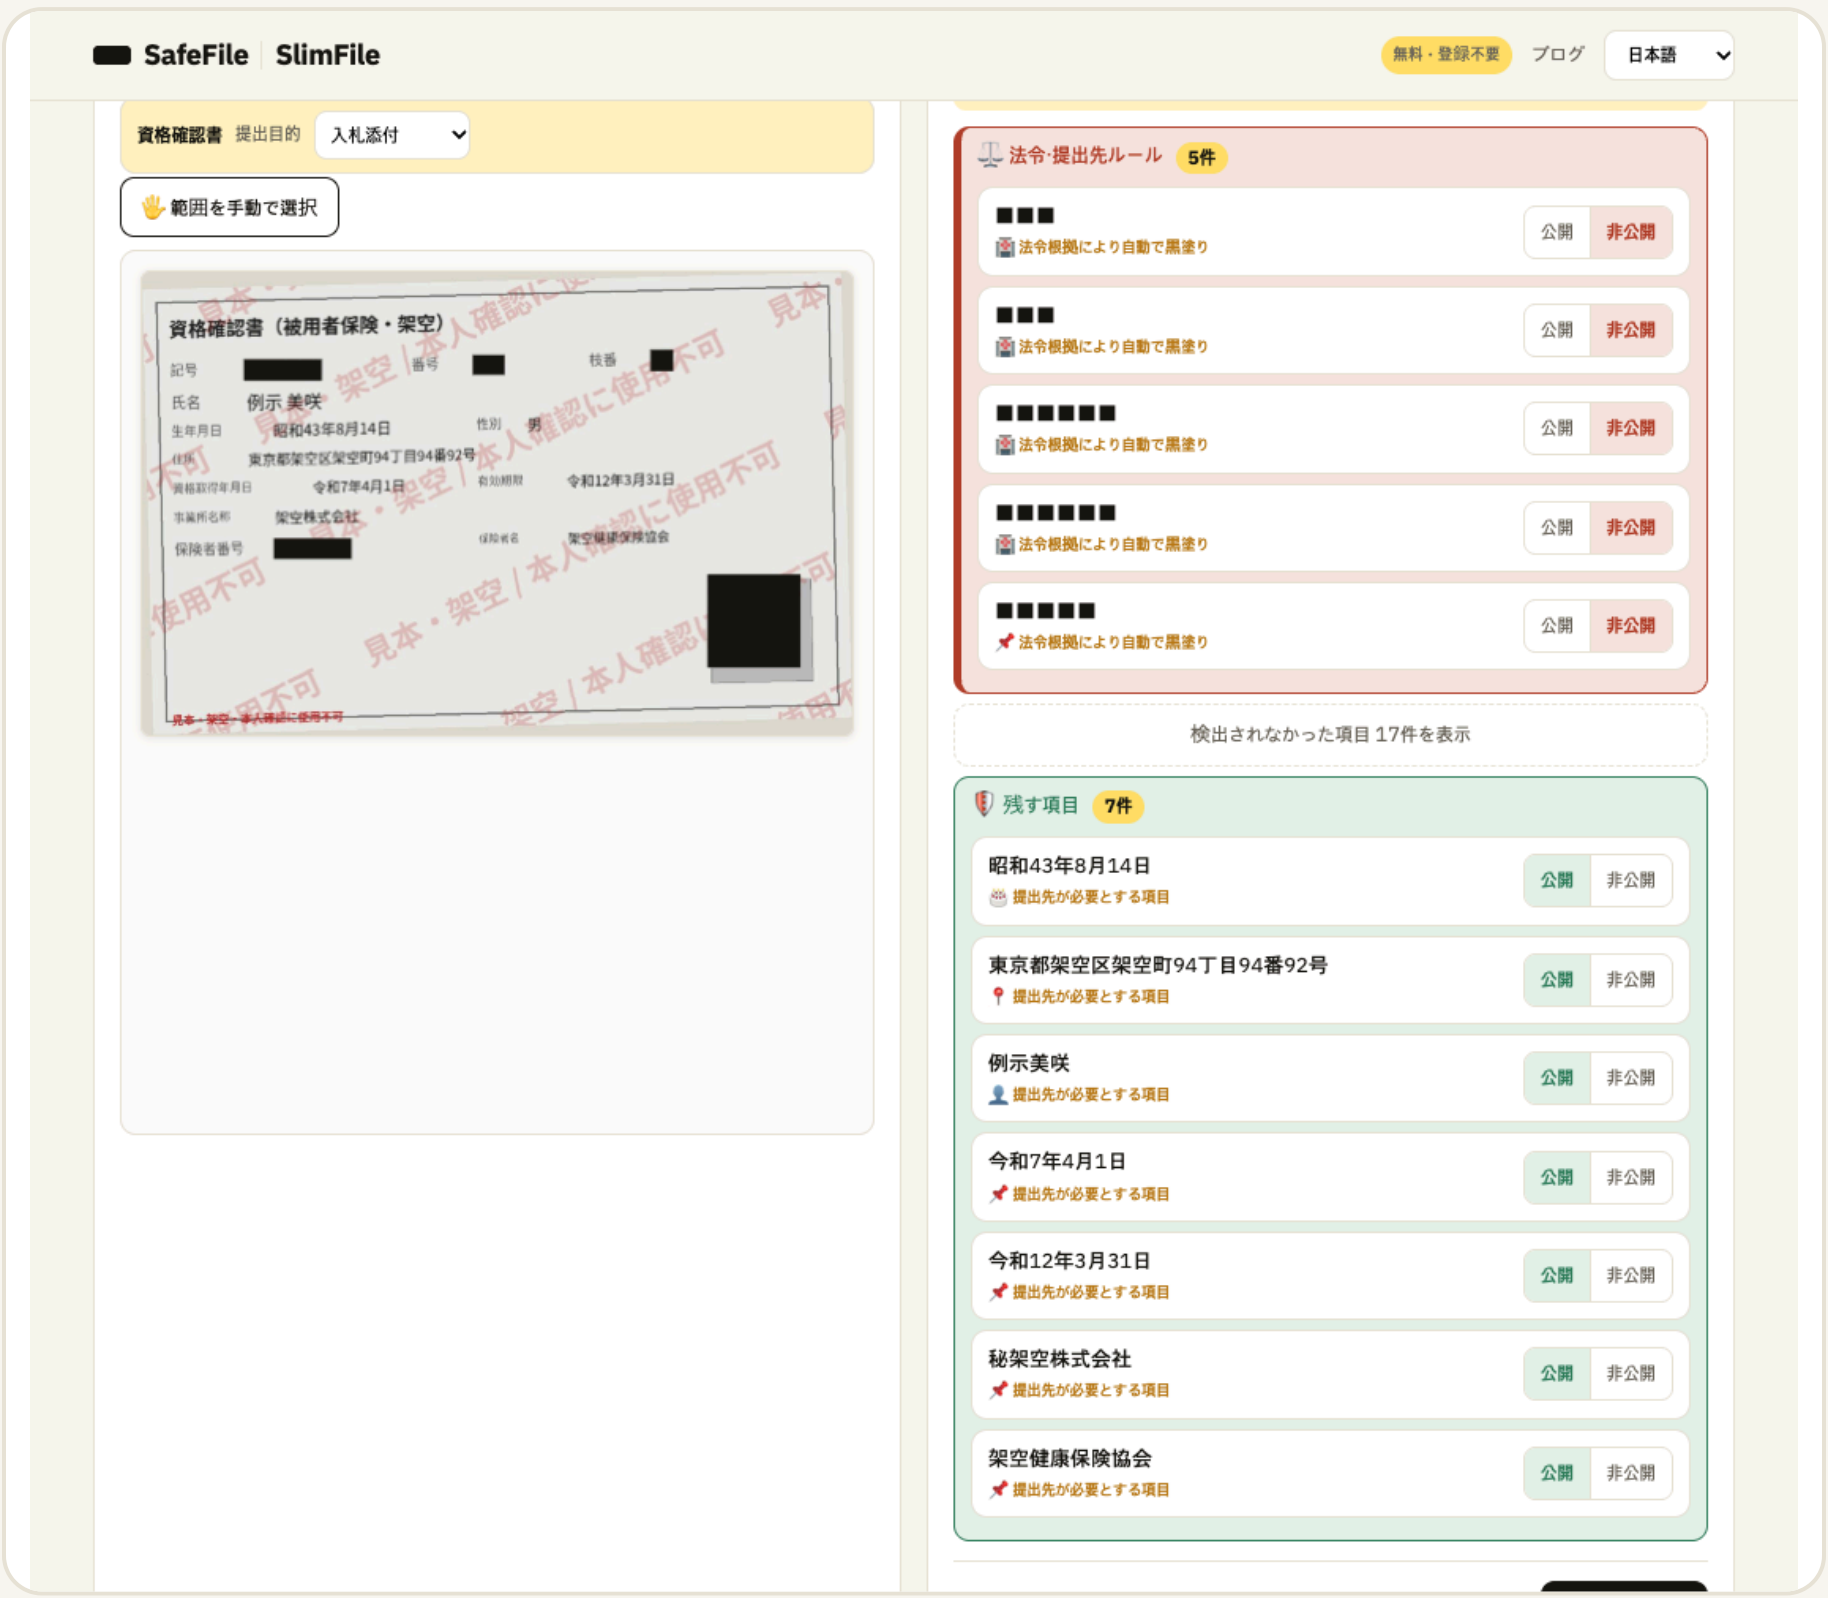

Always check the recipient's own instructions. Rules differ by who you are sending the document to.

SafeFile | SlimFile

Step 2 — say where it is going

Say where it is going. This one is "bid_attachment".

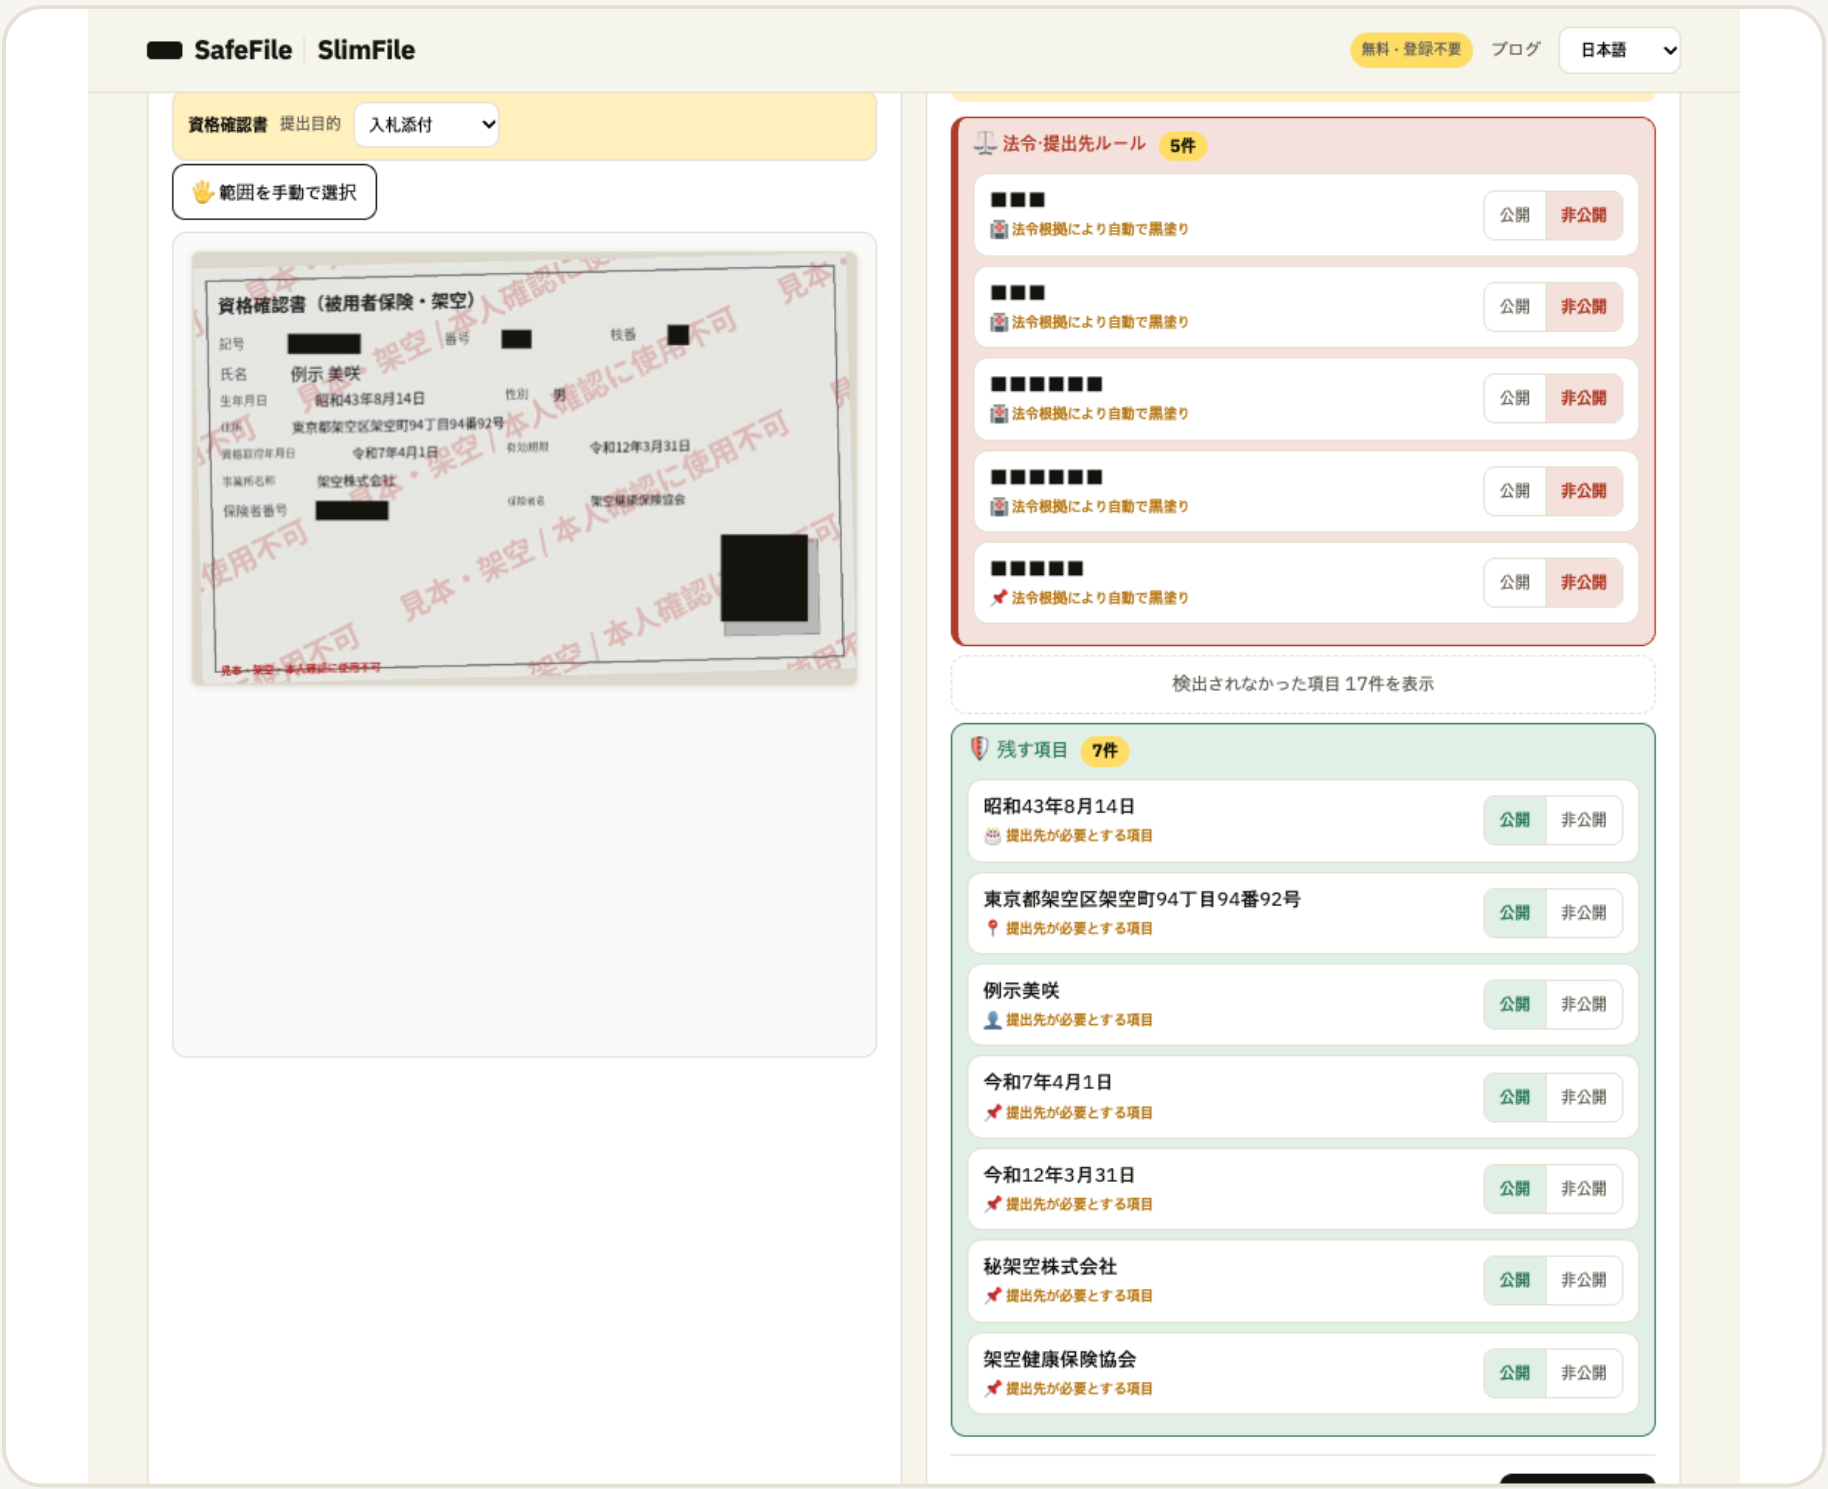

Always check the recipient's own instructions. Rules differ by who you are sending the document to.

SafeFile | SlimFile

Step 3 — check what will be covered

The parts to cover are marked for you. You can change any of them.

Always check the recipient's own instructions. Rules differ by who you are sending the document to.

SafeFile | SlimFile

Step 4 — save it

Save. The file becomes a flat picture, so nothing is hidden underneath.

Always check the recipient's own instructions. Rules differ by who you are sending the document to.

It's free. Try it and tell me what confused you.

No account, no upload. If you handle documents like this, the part that felt confusing is the most useful thing you can send me.

TRY IT
